Empowering
your team with an effective learning solution for training and professional development

Moodle, the world's most widely used learning platform, provides powerful tools to empower over 140 million people worldwide to learn online. Our scalable, cost-effective and flexible solutions support the education and training needs of many organisations around the world.

Moodle Workplace has been designed to support organisations and businesses, enabling you to:

• Build your employee training, compliance and induction programs easily

• Access your training system from anywhere on any device

• Customise your reports, your workflows and your interface

Empower and train your people with an engaging learning experience

Moodle's powerful, flexible and customisable learning management system helps you deliver effective corporate training and professional development, and share knowledge across your organisation.

Build your employee training and compliance program

Establish training paths for your employees grouping courses and content into programs. Create recurring certifications based on programs with a defined validity period that need to be retaken and keep your employee certifications up to date.

Reflect your organisational structure

Adapt the software to your company structure defining roles and hierarchies that automatically create reporting lines. Assign management rights and security permissions to each role.

Customise your reports

Save time by generating your reports easily in a drag and drop interface with instant preview filtering and aggregating any data in the internal Learning Record DataStore (LRD). Schedule reports to be sent automatically to different audiences.

Customise the look and feel

A highly customisable interface with a clean design that can be tailored to any need, enabling you to easily add shortcuts to admin features and optimise system management.

Access your training system from anywhere

Empower your people to engage in their learning and development from anywhere on any device. Moodle allows you to develop a fully branded Workplace App for a completely customised experience.

Integrate with your existing systems

Sync your workforce training and development with HR systems importing and exporting the company structure, position frameworks and job assignments for your users.

Manage centrally, delegate with ease

Moodle Workplace's multi-tenancy architecture allows you to give each of your divisions, departments or franchises their own full LMS platform. Choose which permissions you give each tenant and delegate the LMS management to the people actually doing the job.

Automate your workflow

Save on your admin time by automating course enrolments, certification allocations or security management for different user groups with a set of 'if-this-then-that' rules that you can define, template and save.
